DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the means for adjusting recited in claim 1, means for controlling (microcontroller) recited in claims 1 and 8-11, sensor recited in claims 9 and 10, and electrical contact recited in claim 10 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 and 8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kraan in view of WO 02/24043 (Patenotre et al.).

There is disclosed in Kraan a coffee-maker comprising: a case for reception of means for supplying hot water; a two part infusion head, including a fixed part 4, 32 and a movable part 34; an elastic restoring means 62A, 62B for maintaining the two parts spaced apart; and a locking device 52 to maintain the two parts in a closed position, the locking device including an operating spring 96.

Patenotre discloses a locking device operable to maintain two opposed members together, the device including means for adjusting operating parameters of the device and means for controlling (microcontroller) the opening of the locking device at an end of a signal emitted by the adjusting means.

It would have been obvious to one skilled in the art to provide the device of Kraan with the locking device control means and means for adjusting disclosed in Patenotre, in order to allow for automatic operation of the locking device.

Allowable Subject Matter

Claims 6 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patent to Beaulieu et al. is cited for its disclosure of a control and adjusting means.
